COMPANY INFORMATION

An Introduction to Our Company

We are pleased to introduce SHANGRI-LA HUAHIN CO., LTD. and the approach we bring to construction and building-improvement assignments. This profile is intended to help prospective clients and project partners understand our areas of interest and the way we organise project information.

Our company emphasises a clearly agreed scope of work, transparent itemised quotations and practical communication from the initial discussion through project completion.

As our business develops, we continue to organise our project information and supporting documentation with care, while remaining open to project enquiries and professional collaboration.

COMPANY INFORMATION

Company Overview

SHANGRI-LA HUAHIN CO., LTD. provides a point of contact for clients considering construction, renovation and related site-improvement works in Thailand. The company presents its services and selected project information at shangrilahuahin.com.

We recognise that each project requires its own technical review, commercial assessment and coordinated execution plan. Our proposal for any assignment is therefore developed around the actual scope and conditions presented by the client.

COMPANY INFORMATION

How We Approach Every Assignment

Clarity at the outset supports sound decisions throughout a project. We seek to document work requirements, material assumptions, deliverables and relevant exclusions before an agreed scope is undertaken.

We also value a respectful working relationship: listening carefully to the client, explaining practical constraints, keeping relevant records and communicating when a decision or instruction is required.

COMPANY INFORMATION

Services & Areas of Work

Our areas of service include selected residential building works, building renovation, extensions, property improvement and associated external works. The precise work package is discussed and documented for each proposed assignment.

Specialist work, permits and regulatory requirements are reviewed as part of project-specific planning rather than presented as universal capabilities.

COMPANY INFORMATION

Residential Building Works

Residential assignments may include building works, interior and exterior architectural elements, ancillary spaces and associated improvements, subject to the brief and agreed technical scope.

The completed residential photographs later in this profile illustrate building forms, poolside areas, outdoor circulation spaces and selected interior environments.

COMPANY INFORMATION

Building Renovation & Improvement

Renovation work requires careful coordination with the existing building and any ongoing occupancy or operations. Before quoting, the relevant site conditions, access limitations and requested changes should be reviewed.

Potential activities include repairs, alterations, space improvements and finishing works, with the actual service package agreed in writing.

COMPANY INFORMATION

Site & External Works

External and related site works can include surface preparation, pathways, paving and other works associated with the proposed building or property improvement.

Site conditions, drainage, ground levels and any specialist engineering requirements are considered within the scope and assessment appropriate to the assignment.

COMPANY INFORMATION

Understanding Project Requirements

A useful project conversation begins with the intended purpose of the work, the project location, available drawings or photographs, site access and the client's desired programme.

Where information is incomplete, an initial discussion can identify the items requiring verification before a detailed quotation is prepared.

COMPANY INFORMATION

Defining a Clear Scope of Work

We favour a written scope of work that describes the proposed activities and key deliverables in terms that the client and the delivery team can both review.

Work descriptions, materials, quantities, assumptions and exclusions should be presented clearly so that any later revisions can be assessed against a common reference.

COMPANY INFORMATION

Itemised Quotations & Cost Clarity

An itemised quotation helps the client understand the proposed cost structure and compare the scope against the stated requirements.

Where relevant, a quotation should identify work sections, quantities, unit rates, assumptions and the treatment of approved variations. Pricing is developed for the specific assignment, not implied by illustrative material in this profile.

COMPANY INFORMATION

Planning Before Site Execution

Before site work begins, the team should align on sequencing, access, materials, work areas, delivery arrangements and points at which the client's decision or inspection is needed.

Appropriate technical input, permissions and project-specific controls are considered during this stage, with responsibilities clarified before execution.

COMPANY INFORMATION

Project Coordination

Successful site execution relies on coordination among the client, responsible personnel, suppliers and specialist trades. We seek to maintain clear communication channels and a practical record of instructions.

Coordination also involves considering the sequence of activities so that subsequent work can proceed in the intended order.

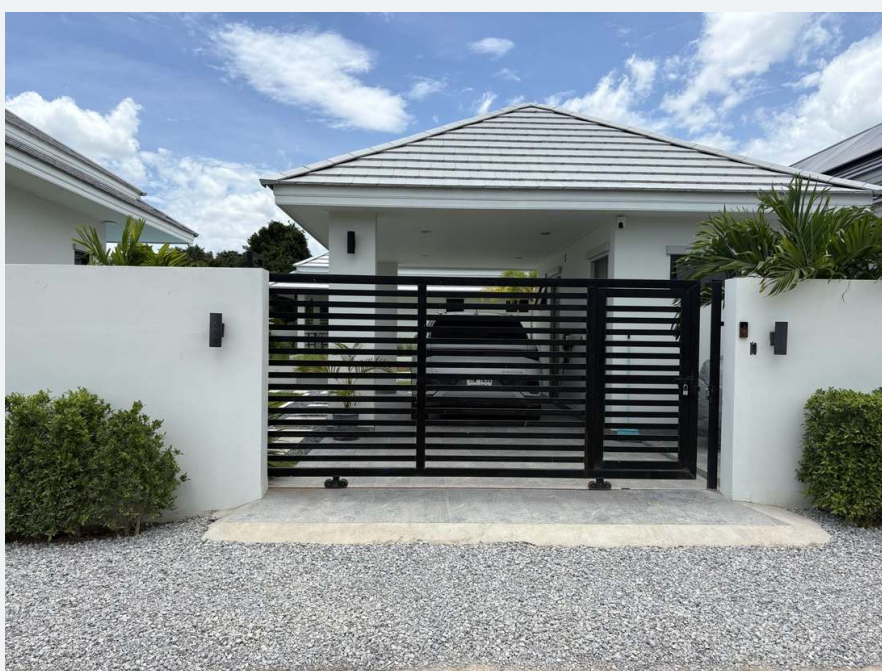

COMPANY INFORMATION

Progress Communication & Records

Progress information is most useful when it relates to actual completed activities and upcoming decisions. Dated photographs, concise updates and tracked outstanding items can support shared understanding.

Our intention is to keep reporting practical and understandable rather than generate unnecessary administration for clients.

COMPANY INFORMATION

On-Site Work Documentation

Photographs document visible conditions at different points in construction. They can help explain foundation preparation, reinforcement, concrete work, structural elements, masonry and subsequent building progress.

The following section presents selected construction photographs in grouped stages. Images are displayed in their original proportions without cropping.

COMPANY INFORMATION

Practical Quality Considerations

Quality considerations begin with agreeing what is to be delivered and establishing how the work will be reviewed at relevant stages.

Project-specific drawings, specifications, inspections and close-out requirements are determined according to the actual scope and applicable responsibilities.

COMPANY INFORMATION

Safety and Site Arrangements

Site safety arrangements should reflect the location, activities, equipment, personnel and any interaction with existing building users.

Appropriate access controls, housekeeping, protective equipment and task-specific precautions are considered when planning the work. Specialist requirements are assessed separately where relevant.

COMPANY INFORMATION

Project Completion & Handover

At completion, the parties should review deliverables against the agreed scope and identify any outstanding items requiring correction or clarification.

A straightforward handover record can help establish the condition of the work and the documents to be provided for subsequent operation or maintenance.

COMPANY INFORMATION

Working With Our Company

Prospective clients are welcome to share a brief description of the project, relevant drawings or photographs, its general location and the preferred timeframe for discussion.

We will review the enquiry and advise on the information needed to consider an appropriate proposal or next meeting.

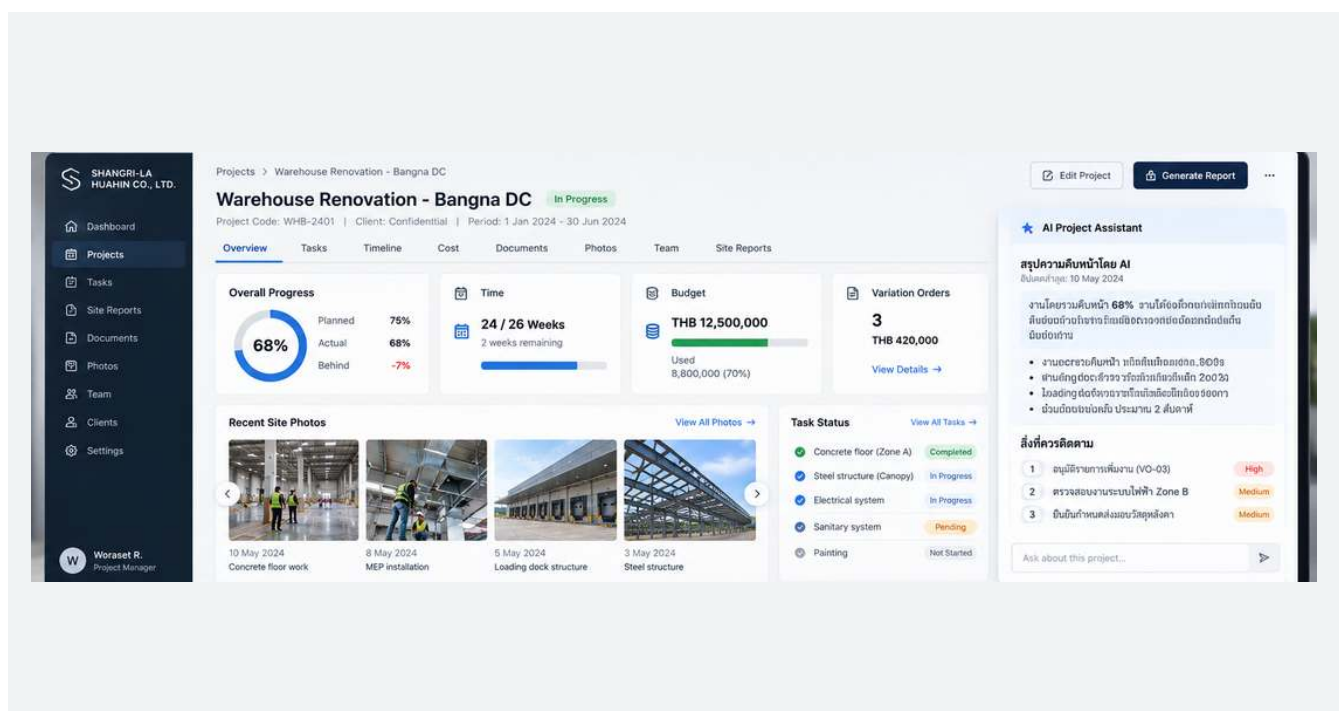

COMPANY INFORMATION

Digital Information & AI-Assisted Tools

We are exploring AI-assisted methods for organising project information, progress records and supporting documents. These tools are intended to assist administrative clarity, not replace the judgement of responsible professionals.

Any interface illustration used in supporting material is an illustrative concept. Project commitments, technical decisions and contractual terms remain subject to human review and agreement.

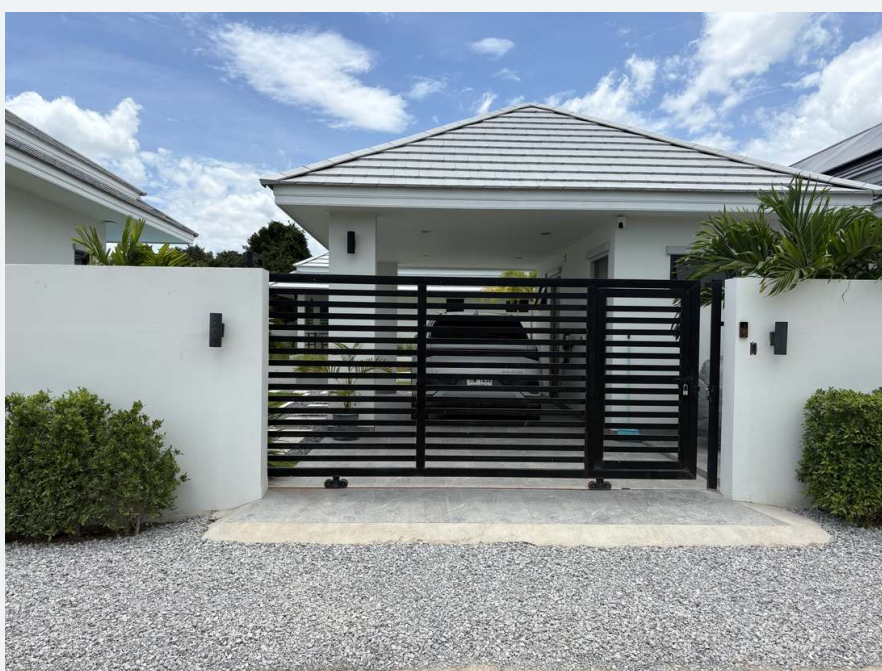

COMPANY INFORMATION

A Responsible Approach to Future Projects

We appreciate the opportunity to introduce our company through this general profile. Our aim is to build lasting professional relationships through clear expectations, responsible coordination and a willingness to improve.

We welcome a discussion about appropriate construction, renovation and property-improvement opportunities.

Project Introduction and Design Documentation

Shangri-La Residence is presented as part of SHANGRI-LA HUAHIN CO., LTD.'s property development and design-coordination work. The project materials include a site master plan, architectural drawings, building-services documentation and carefully selected presentation imagery.

This section moves from the overall site arrangement to floor plans, elevations, sections and interior perspectives. Its purpose is to provide a clear, readable introduction to the project while retaining the information contained in the original design sheets.

Original drawing sheets are reproduced in full. Presentation images are limited to compositions already selected for the Shangri-La Residence website.

Project Overview

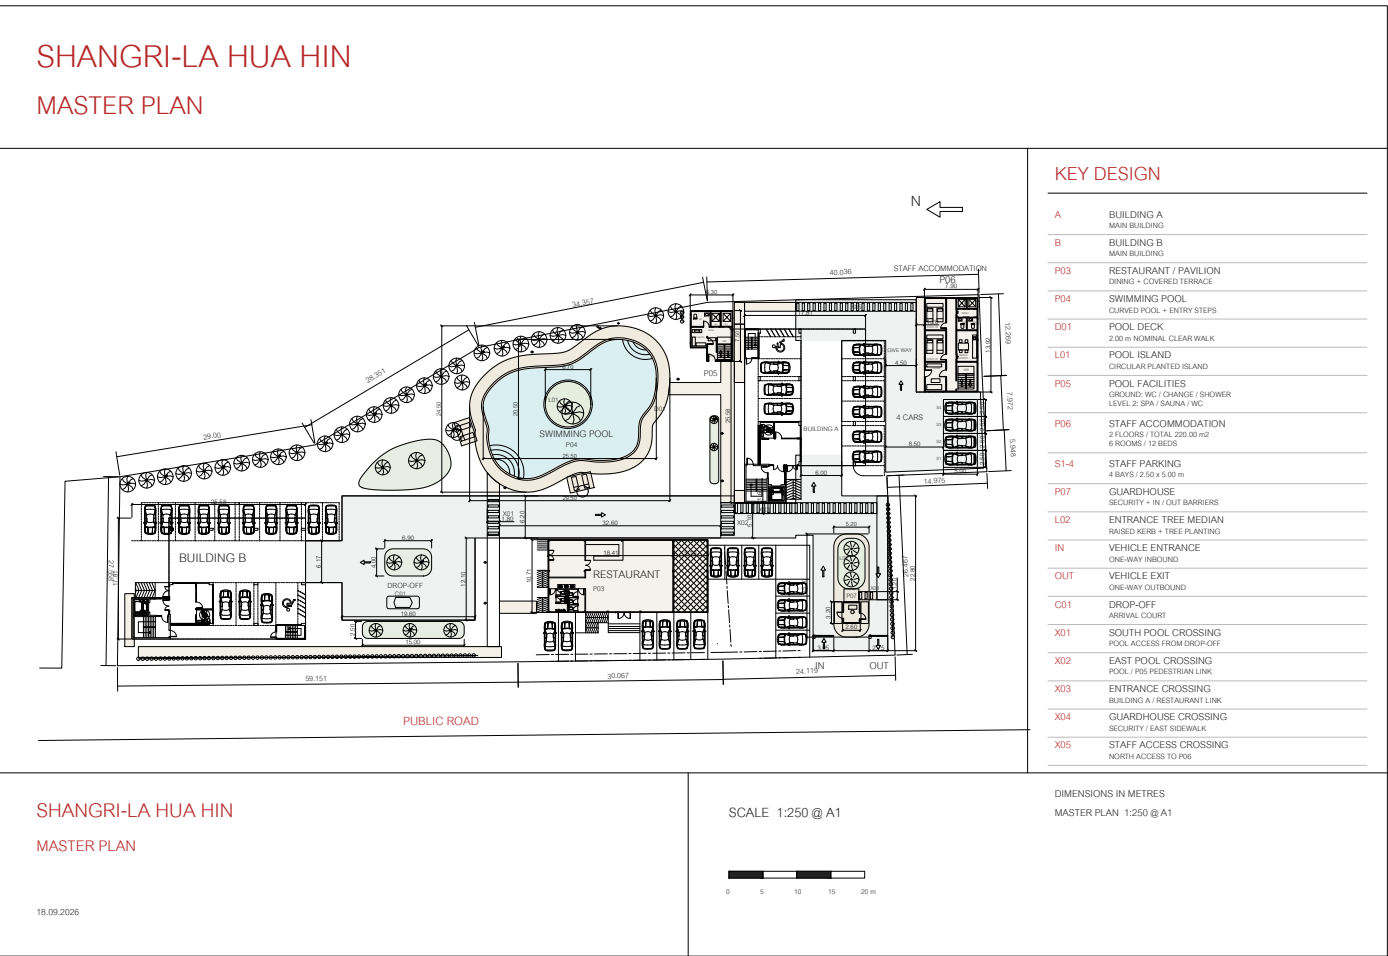

The current site documentation presents two residential buildings, a central swimming pool, shared facilities, service buildings and dedicated entry and exit arrangements. The master plan provides the overall context for the placement and movement between these elements.

The architectural drawings illustrate floor-by-floor arrangements, residential spaces, stairs, circulation and supporting areas. Individual drawing numbers and revision dates remain the appropriate reference for technical details.

Original Site Master Plan

The site master plan shows how the residential buildings, swimming pool, restaurant, service areas and access routes are organised together.

SITE MASTER PLAN / COMPLETE ORIGINAL SHEET

DRAWING OVERVIEW

This drawing gives an overall view of the project layout and the relationship between its main spaces.

Site Planning and Movement

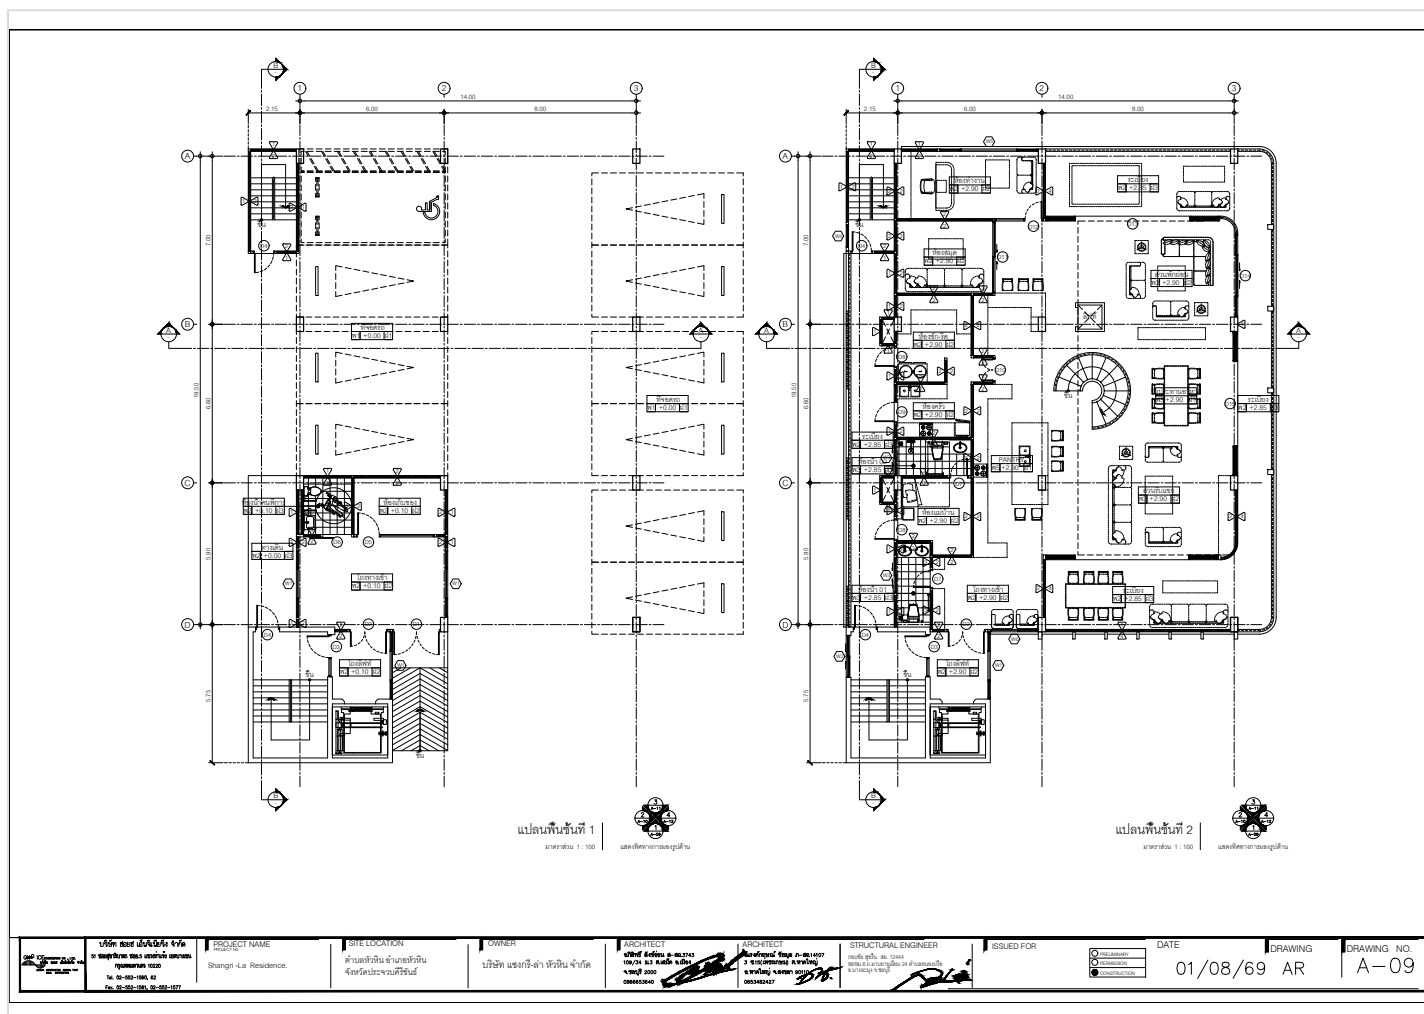

The master plan brings together the residential buildings, arrival court, swimming pool, supporting facilities and circulation routes on one drawing. It provides a useful first view of how different parts of the development connect.

The drawing also identifies the main pedestrian and vehicle routes, shared spaces and related facilities. Presenting this information alongside the architectural drawings makes the project easier to discuss with prospective clients and project partners.

Architectural Plans - Levels 1 and 2

These plans show the ground-level arrangement and the first residential level, including circulation, parking and principal interior spaces.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

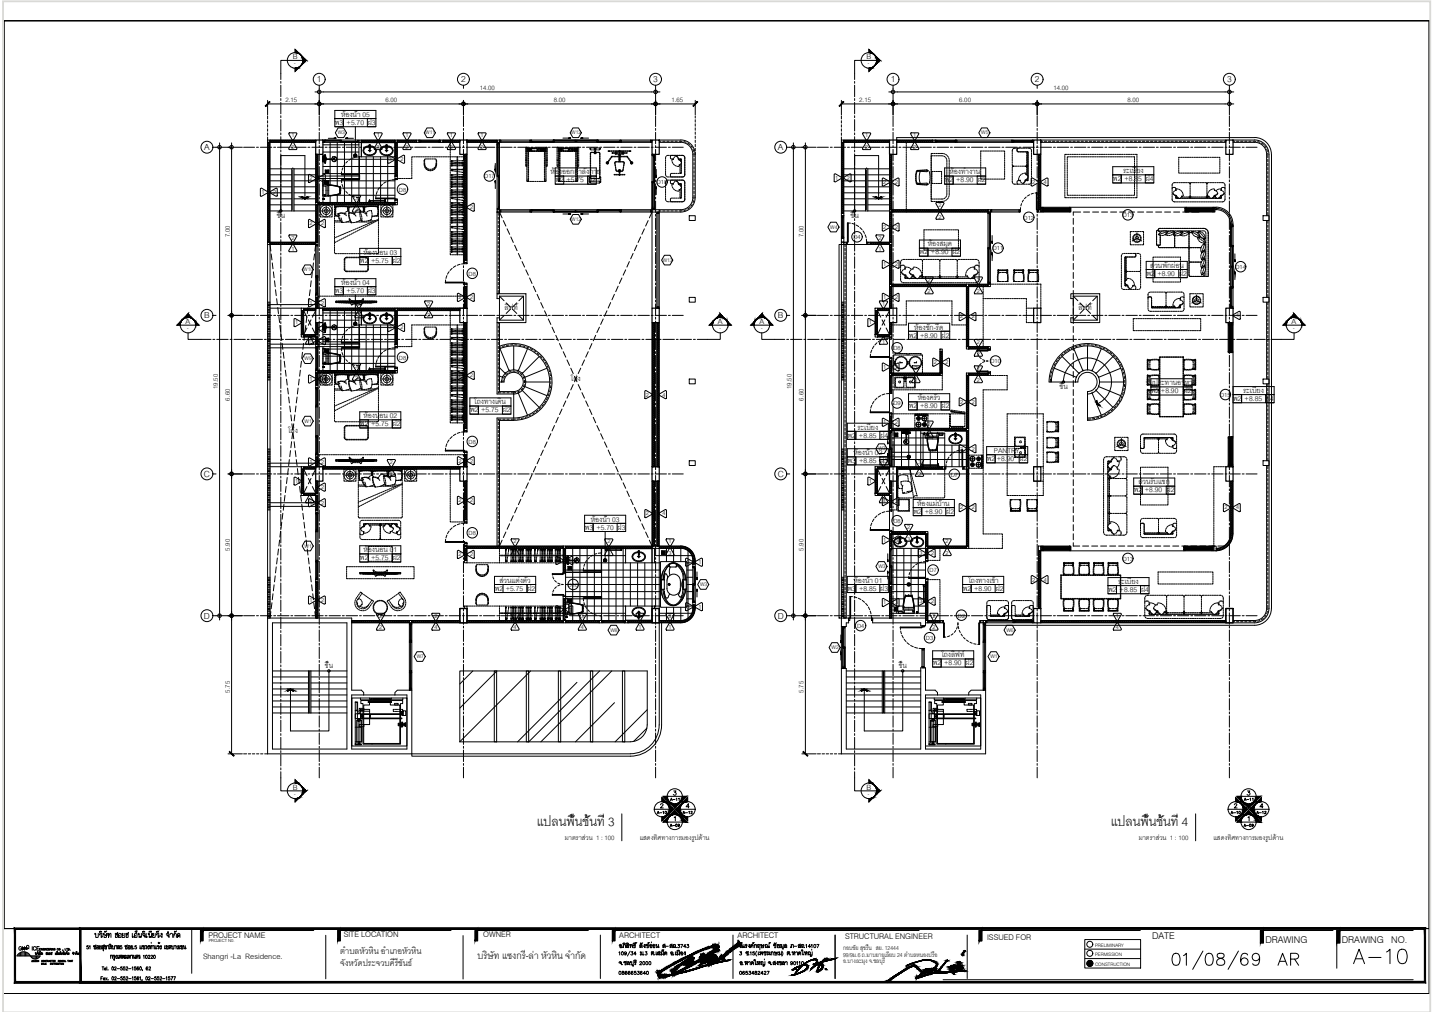

DRAWING OVERVIEW

The paired drawings help explain how building access connects to the residential layout above.

Architectural Plans - Levels 3 and 4

The floor plans show the arrangement of rooms, stairs, circulation and shared architectural elements across these levels.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

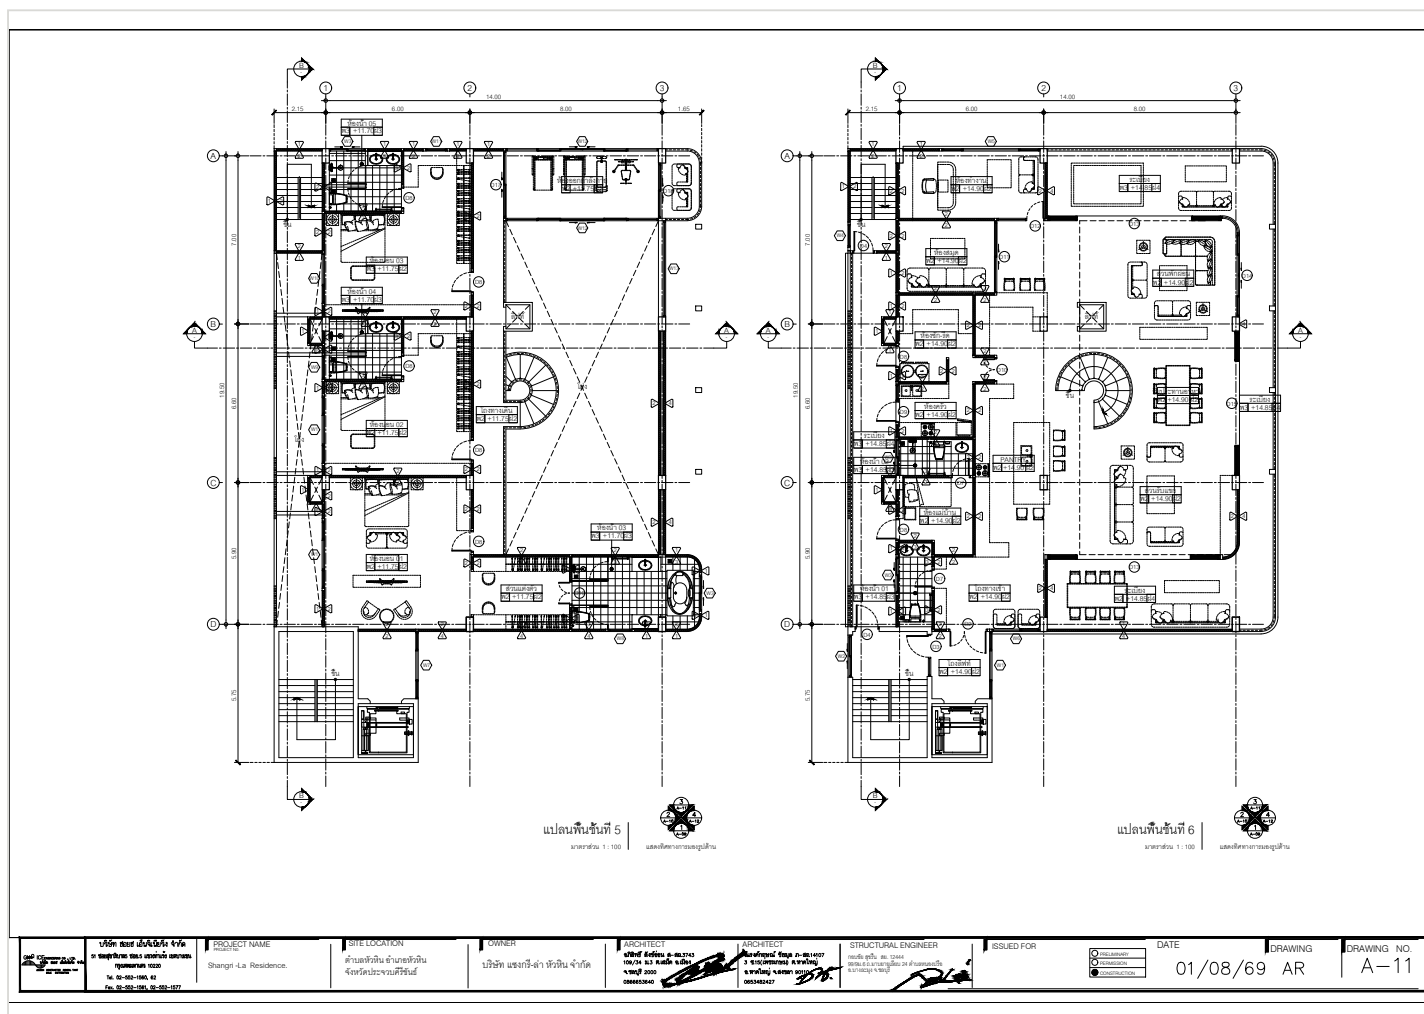

DRAWING OVERVIEW

Each original drawing is retained in full, including its dimensions and title block.

Architectural Plans - Levels 5 and 6

These drawings document the repeated residential organisation and the relationship between the two levels.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

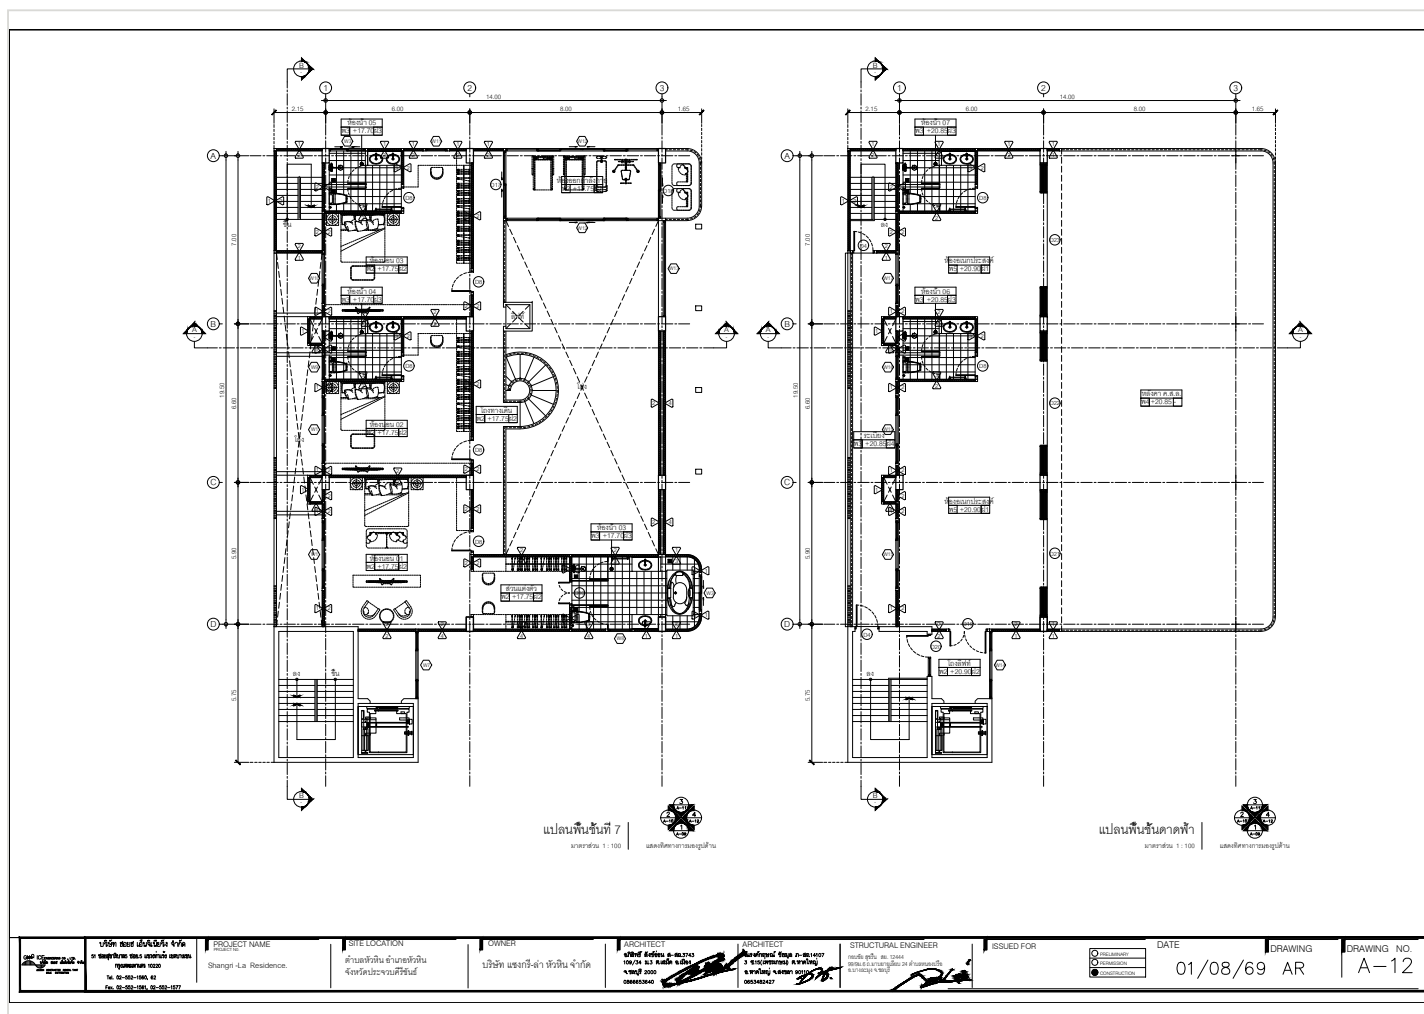

DRAWING OVERVIEW

They provide a practical reference for discussing room layouts and vertical circulation.

Architectural Plans - Level 7 and Roof Deck

The drawings describe the uppermost residential level alongside the building roof and related circulation areas.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

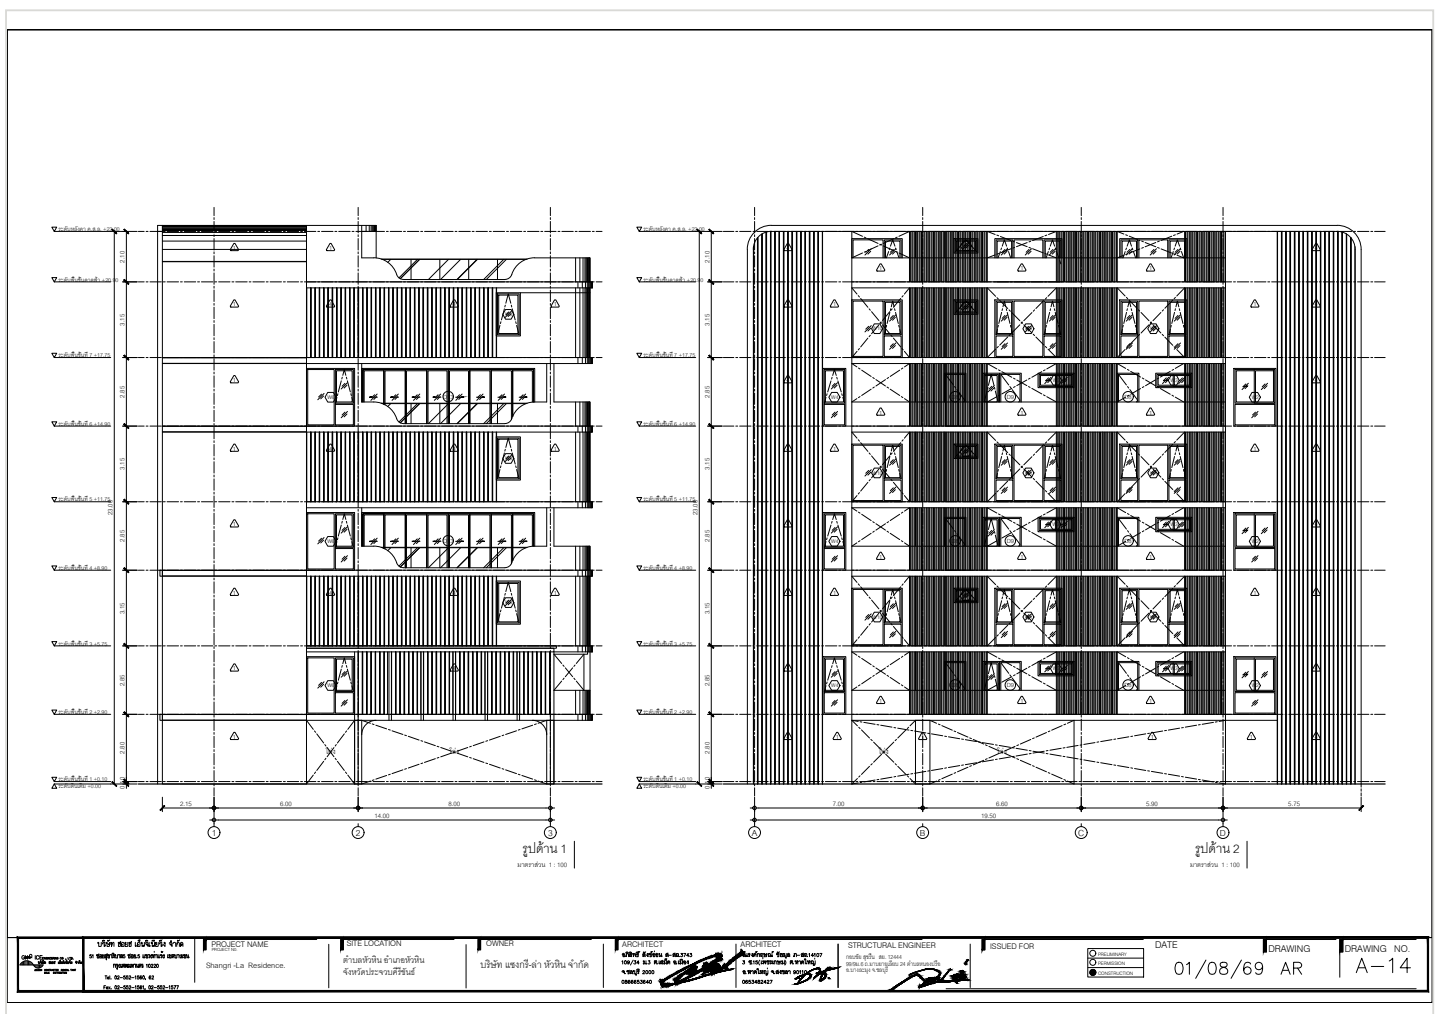

DRAWING OVERVIEW

The complete original sheet is presented for convenient reference.

Architectural Elevations - Views 1 and 2

Architectural elevations describe the building form, facade proportions and relationships between the floor levels.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

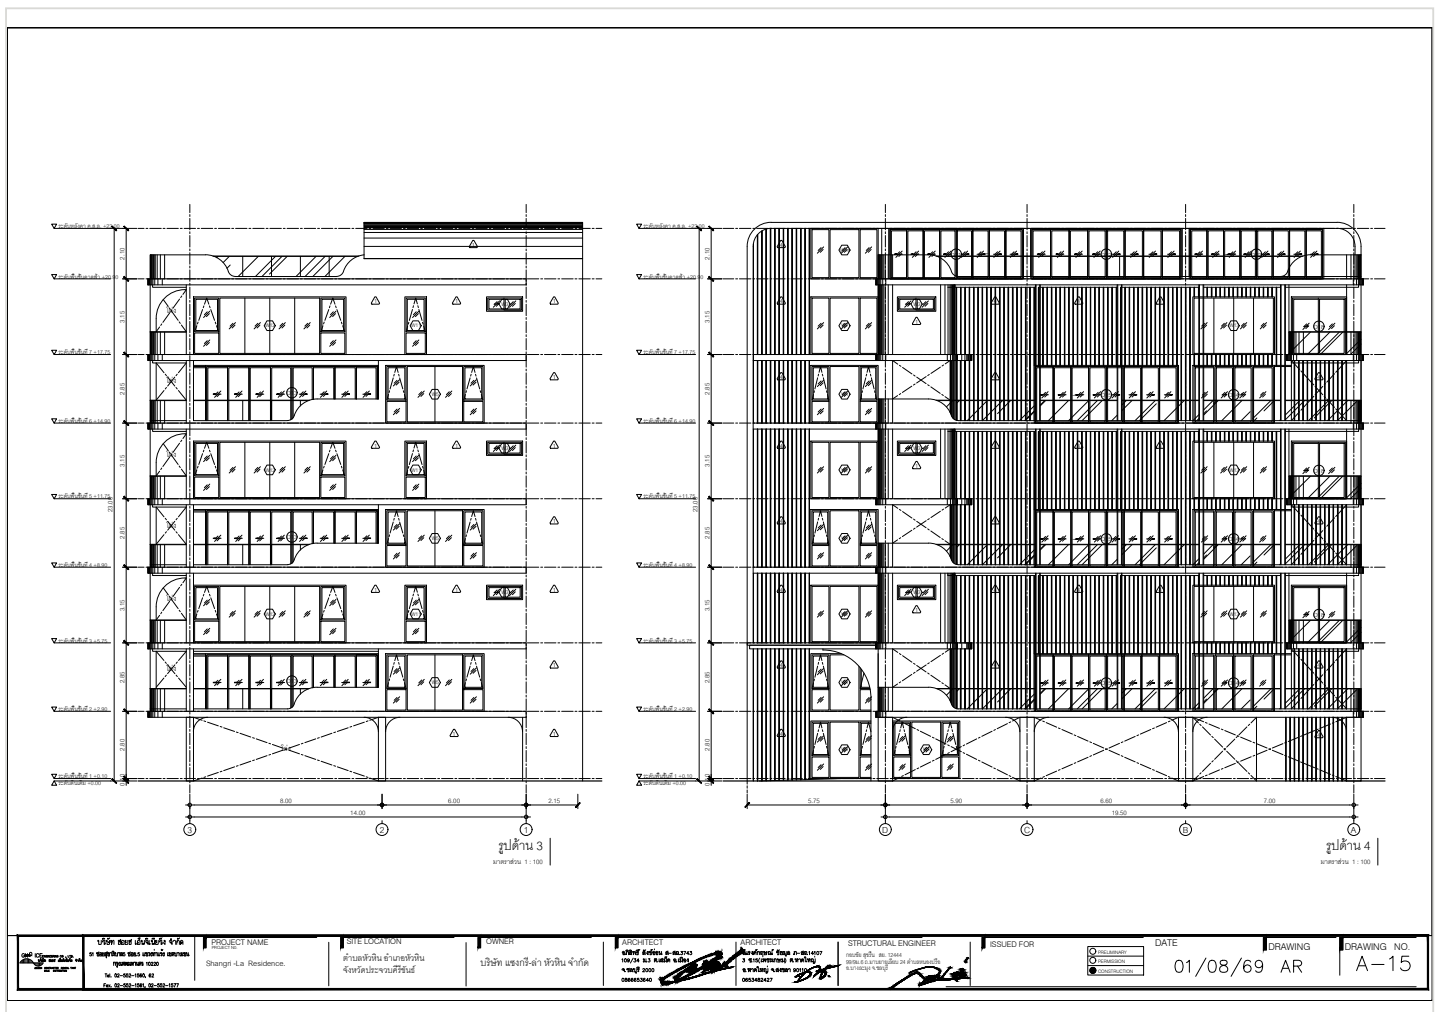

DRAWING OVERVIEW

These two views support a clearer understanding of the external architectural composition.

Architectural Elevations - Views 3 and 4

The remaining elevations show the exterior design from complementary directions and document the building levels.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

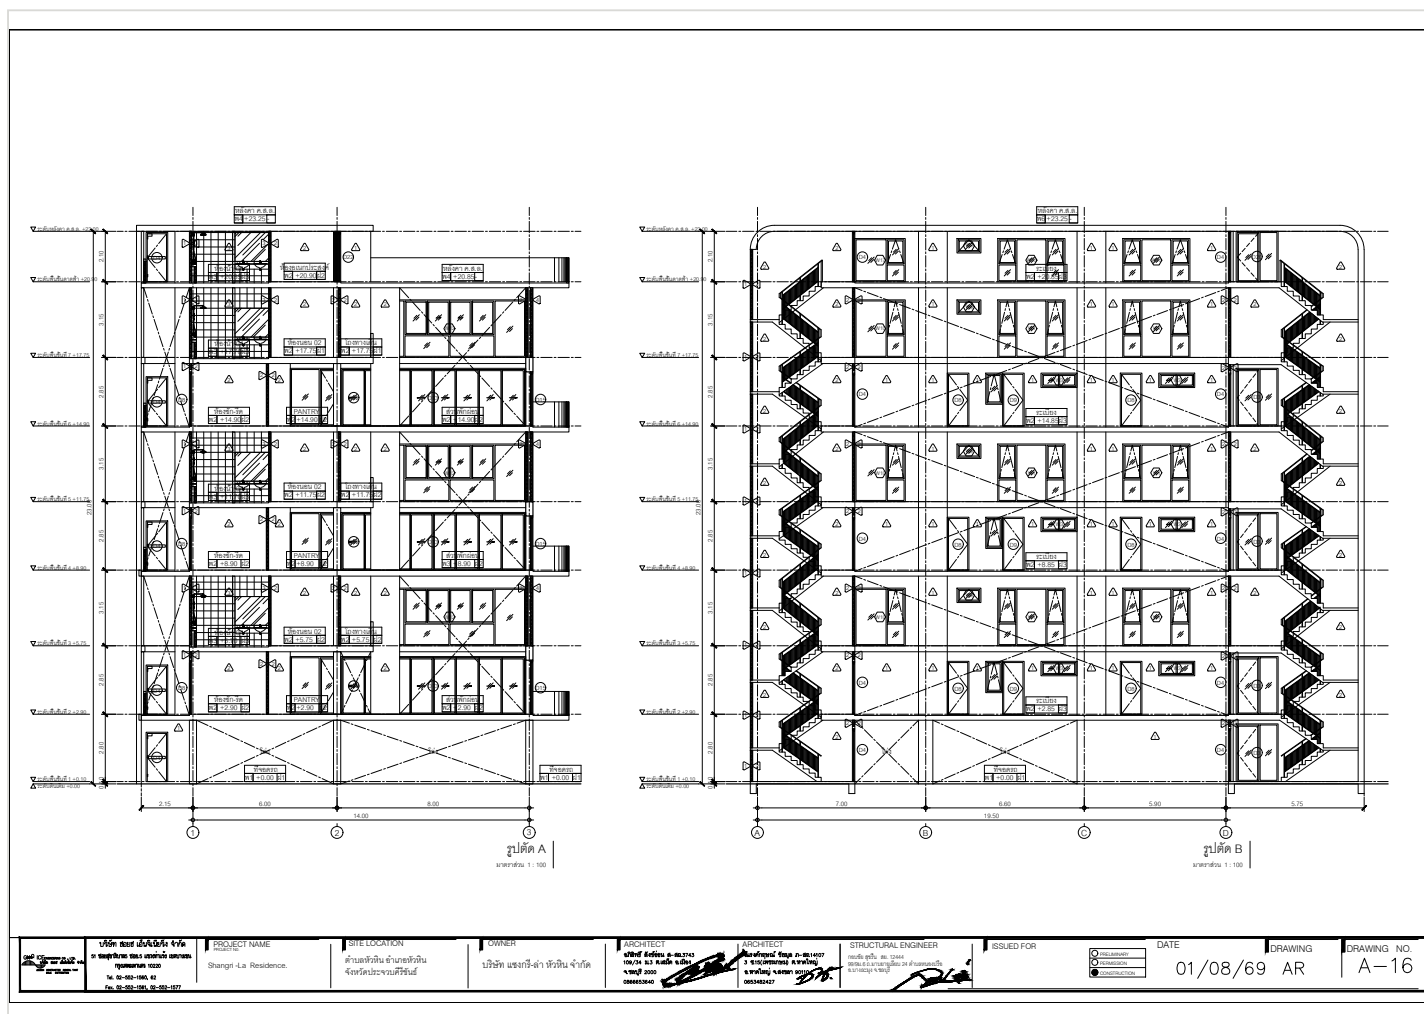

DRAWING OVERVIEW

Together with the preceding sheet, they present the principal facades of the building.

Architectural Sections - A and B

The sections illustrate vertical relationships among floors, stairs, interior volumes and the overall building height.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

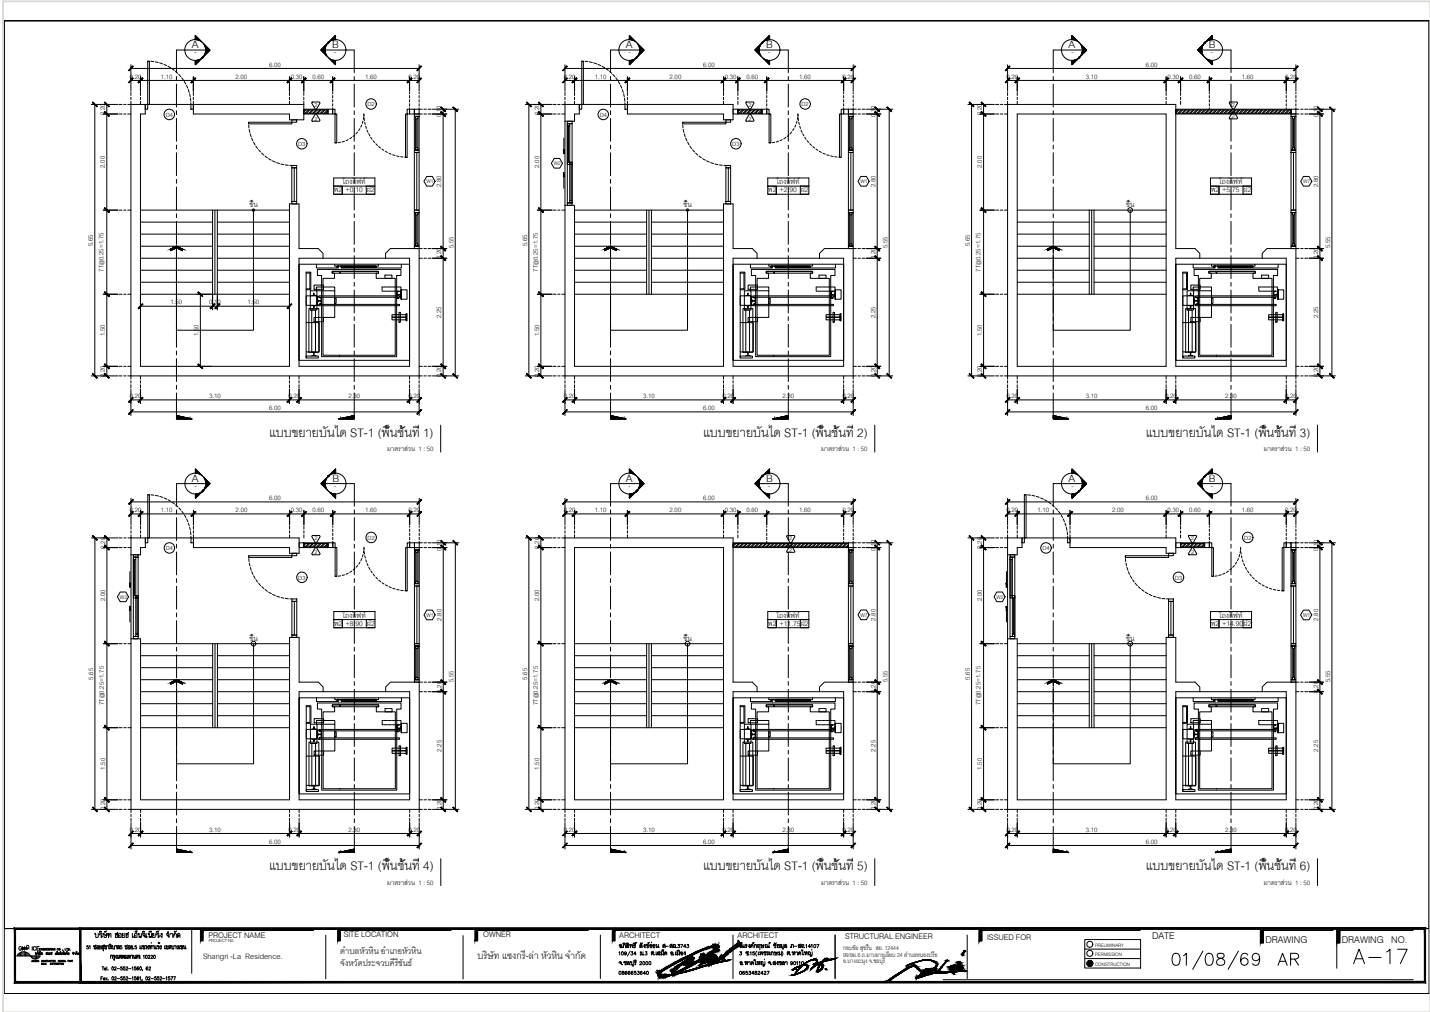

DRAWING OVERVIEW

These views support discussions about the spatial experience and building proportions.

Architectural Details - Stair and Access Plans

This original drawing contains architectural details for stairs and connected access areas within the building.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

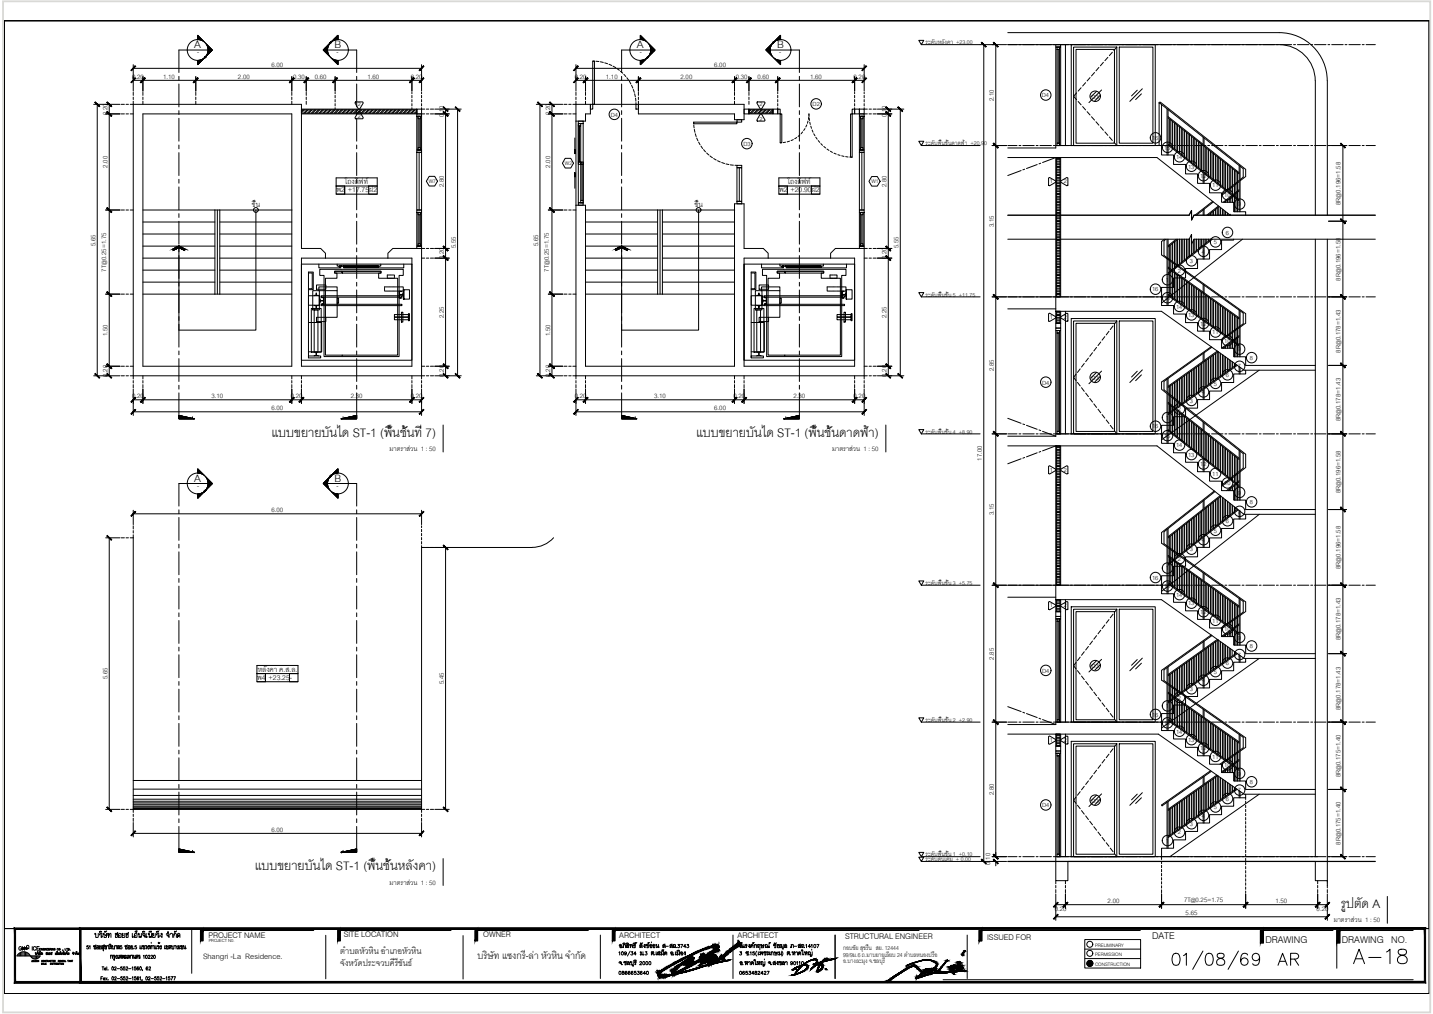

DRAWING OVERVIEW

The dimensions and drawing references are preserved for technical review.

Architectural Details - Stair Construction

The architectural detail sheet presents selected stair geometry, dimensions and construction-related details.

ARCHITECTURAL DRAWING / COMPLETE ORIGINAL SHEET

DRAWING OVERVIEW

It complements the floor plans and sections shown in the preceding pages.

Building Exterior Perspective

A representative exterior perspective highlighting the residential building design, façade articulation, balconies, glazing, and evening ambience of the project.

Architectural visualization • Exterior perspective provided for the Shangri-La Residence presentation

Pool and Shared Landscape

The swimming pool and landscaped shared space as presented on the project website.

Architectural visualization • Image selected for the Shangri-La Residence website

Shared Pavilion and Dining

An architectural perspective of the proposed shared dining and pavilion facilities.

Architectural visualization • Image selected for the Shangri-La Residence website

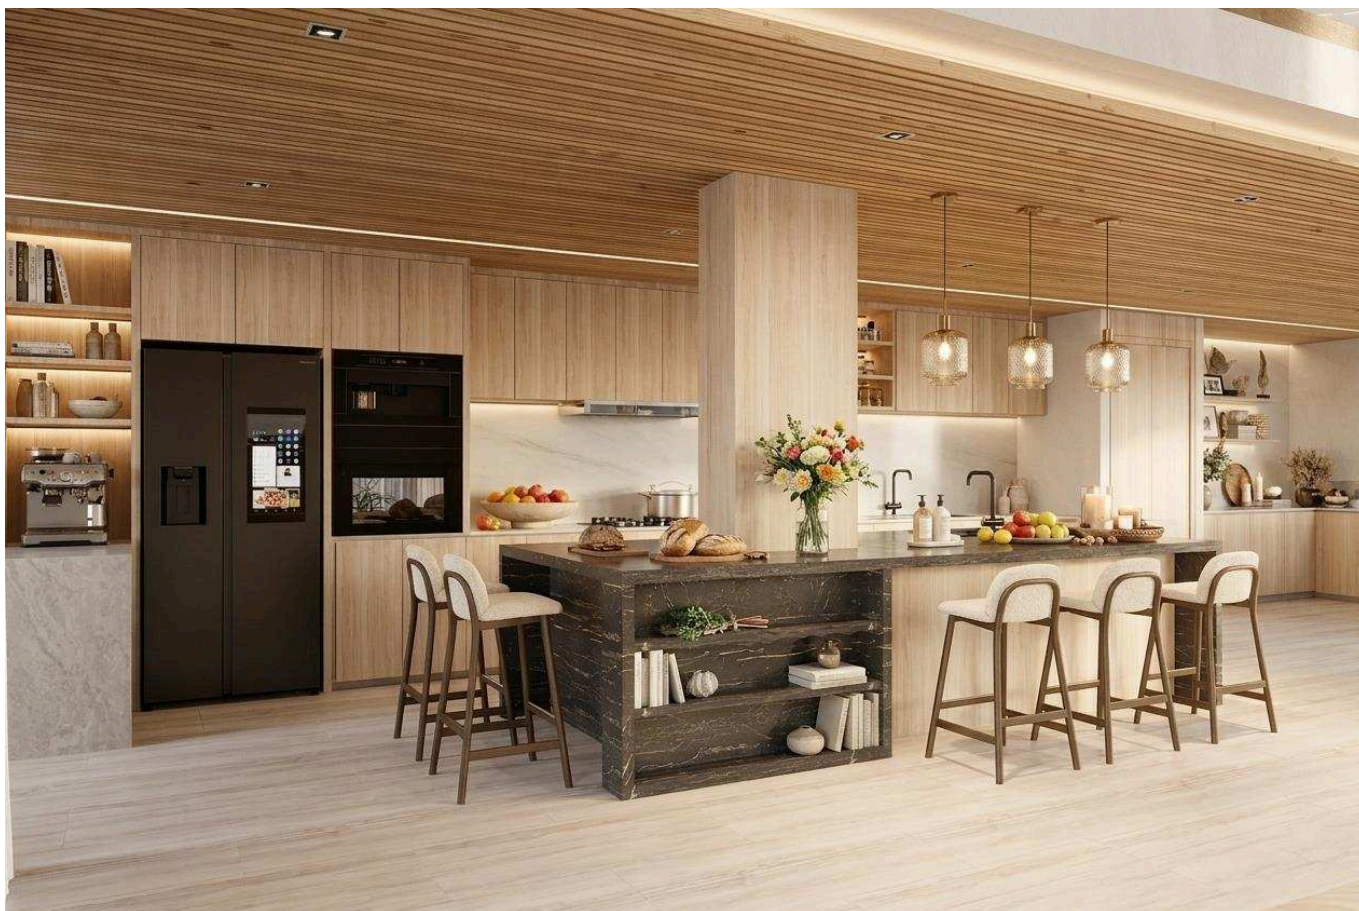

Double-height Living Space

Interior presentation showing the relationship between the living area and upper gallery.

Architectural visualization • Image selected for the Shangri-La Residence website

Kitchen and Dining Connections

A presentation view of the open kitchen and its relationship to adjacent living spaces.

Architectural visualization • Image selected for the Shangri-La Residence website

Clear Documents, Clearer Project Discussions

A coordinated selection of master plans, floor plans, elevations, sections and presentation images allows the project to be understood from several perspectives, rather than relying on visual impressions alone.

The company welcomes enquiries and constructive discussions about project requirements, scope, technical references and the information needed before a new assignment begins.
